

4

1. Determine the account balance and the percentage of the account balance that you want to risk per trade (1-2% or 3%).
2. Determine the stop-loss (SL) in pips.
3. Calculate the lot size.
4. Execute the trade.

Example

Step	Calculation	Result
Step 1	$10000 \times 1\%$	$10000 \times 1\% = 10\$$
Step 2	$1.0500 - 1.0450$	$1.0500 - 1.0450 = 50 \text{ pips}$
Step 3	$10\$ \div 50 \text{ pips}$	$10\$ \div 50 \text{ pips} = 0.02 \text{ lot}$
Step 4	$0.02 \times 50 \text{ pips}$	$0.02 \times 50 \text{ pips} = 10\$$

Summary

Account Balance	Trade Details
• $10000 \times 1\% = 10\\$ • SL: 50 pips • 0.02 • $10\\$ • $0.02 \times 50 \text{ pips} = 10\\$	• $1.0500 - 1.0450 = 50 \text{ pips}$ • $10\\$ \div 50 \text{ pips} = 0.02 \text{ lot}$ • $0.02 \times 50 \text{ pips} = 10\\$
